PROFESSIONAL SUMMARY

I'm a self-driven backend developer with a degree in Information Technology from NOUN and certification from ALX's Software Engineering program. Experienced in backend development using Node.js, Express, and MongoDB, with a passion for building efficient web services and scalable applications. Skilled in implementing OAuth-based authentication and REST APIs.

Skills

- **Backend Technologies:** Node.js, Express.js
- **Databases:** MongoDB, MySQL
- **Authentication:** OAuth (Google, Facebook), Passport.js, JWT
- **Version Control:** Git, GitHub
- **Tools:** Postman, Docker
- **Others:** REST APIs, Session Management, Debugging & Error Handling

Education

- **Bachelor of Science (B.Sc.)** – Information Technology
National Open University of Nigeria (NOUN)
[Graduation Year]
- **Software Engineering Program**
ALX Africa
Graduated as a backend developer with focus on real-world projects. Gained skills in building web services, working in teams, and managing production-level code.

Projects & experience

1. Blog Platform with Authentication

- **Developed** a blog application using **Node.js** and **Express.js** to manage content securely.
- **Implemented** JWT-based authentication to safeguard user login sessions.
- **Integrated** Google and Facebook OAuth using **Passport.js**, enhancing user convenience and expanding access methods.
- **Designed** and **optimized** MongoDB collections to support efficient CRUD operations for blog posts and user data.

- **Tested and debugged** endpoints using **Postman**, ensuring smooth API interactions.

Tools: Node.js, MongoDB, JWT, Passport.js, Postman

HOBBIES & INTERESTS

- Exploring new technologies
- Contributing to open-source projects
- Blogging about tech innovations
