PROFESSIONAL SUMMARY

I'm a self-driven backend developer with a degree in Information Technology and certification from ALX's Software Engineering program. Experienced in backend development using Node.js/Nestjs, Express, and MongoDB, with a passion for building efficient web services and scalable applications. Skilled in implementing OAuth-based authentication and REST APIs.

Skills

- Backend Technologies: Node.js/Nestjs, Express.js
- Databases: MongoDB
- Authentication: OAuth (Google, Facebook), Passport.js, JWT
- Version Control: Git, GitHub
- Tools: Postman, Apidog
- Others: REST APIs, Session Management, Debugging & Error Handling

Education

- Bachelor of Science (B.Sc.) Information Technology National Open University of Nigeria (NOUN)
 2022
- Software Engineering Program

ALX Africa

Graduated as a backend developer with focus on real-world projects. Gained skills in building web services, working in teams, and managing production-level code.

Projects & experience

1. Blog Platform

- Developed a blog application using Node.js and Express.js to manage content securely.
- Implemented JWT-based authentication to safeguard user login sessions.
- Designed and optimized MongoDB collections to support efficient CRUD operations for blog posts and user data.
- Tested and debugged endpoints using Postman/Apidog, ensuring smooth API interactions.

• Tools: Node.js, MongoDB, JWT, Postman

2. Book Management API

- **Developed** a book management API using NestJS and MongoDB to handle book cataloging and user authentication.
- Designed and optimized MongoDB schemas for efficient CRUD operations on books and users.
- Implemented search functionality with regex and pagination for improved user experience.

 Tested and debugged API endpoints using Postman/Apidog to ensure reliability.
- Tools: NestJS, MongoDB, JWT, Bcrypt, passport.js, Multer, Postman

3. E-commerce Api

- **Developed** a scalable e-commerce backend using **Node.js** and **Express.js**, handling product management, user authentication, and order processing.
- **Designed** and **optimized** MongoDB collections to support efficient CRUD operations on product management and user data.
- **Tested and debugged** endpoints using **Postman/Apidog**, ensuring smooth API interactions.
- Tools: Node.js, MongoDB, JWT, Postman, Multer, Bcrypt.

4. Google Authentication API

- **Developed** a secure authentication system using Node.js and Express.js with Google OAuth 2.0.
- Integrated **Passport.js** to enable Google login, allowing users to authenticate seamlessly.
- **Tested and debugged** endpoints using **EJS**, ensuring smooth API interactions.
- Tools: Node.js, Express.js, Passport.js, Google OAuth 2.0, MongoDB, Mongoose.

HOBBIES & INTERESTS

- Exploring new technologies
- Contributing to open-source projects
- Exercising and playing football.
